University Hospital Zürich,
5:00pm-6:00pm

Dear colleague

We see an increasing need for PhDs and MDs to communicate in an interdisciplinary world. Therefore, we want to encourage and facilitate the exchange between engineers, clinicians, health and data scientists, especially junior researchers, by providing a platform to meet, interact and discuss research topics and build a community of researchers in Zurich who focus on physiological monitoring and artificial intelligence in medicine.

We have set up a seminar series called Medical Sensors & Data Processing (MSDP) with the aim to strengthen the exchange of ideas and methods and give researchers of all academic levels the opportunity to present their work and network.

The seminar is supported by the Hochschulmedizin Zurich and is available as credit option (1 ECTS) for doctoral students. **The seminars are open to all researchers and clinicians of ETH, UZH, and all University Hospitals.** We aim to have presentations that are focussed, but relevant to an interdisciplinary audience with medical and/or engineering backgrounds.

You and your team are cordially invited to join the seminars and contribute to the discussions and presentations. The seminar series will start in the fall semester. The seminar program is also attached to this letter. More information on the seminar series and an importable calendar entry can be found on this website: www.mhsl.hest.ethz.ch/education/msdp.html

Please share this information with your team and colleagues.

With kind regards

Walter Karlen
